Kevin,

This will be very helpful. I appreciate you getting back with me so promptly. I understand about the size of the intermediate outputs, as long as we have the inputs and the processor used, we should be able to duplicate things ourselves. Does this mean that we will still have the meteorological input files for the Calpuff modeling?

Thanks

RJH

The CD is relatively complete and contains all the executables and control files that would be needed to replicate our modeling. Some intermediate products such as the calmet output files are too large to put on a cd. After you review the CD (on March 5th), if there is other information you need let me know.
